

Digital Marketing with AI

A beginner-friendly guide to the six core skills

Marketing Fundamentals | SEO | Social | Ads | Email & Analytics | AI Content

What You Will Learn

Six building blocks of modern digital marketing, each with simple explanations and practical ways to use AI.

01 **Marketing Fundamentals**
Funnels, audiences, brand positioning, goals

02 **SEO**
Keyword research, on-page SEO, technical basics, link building

03 **Social Media Marketing**
Content calendars, Meta and LinkedIn ads, reels strategy

04 **Search and Display Ads**
Google Ads, bidding, quality score, remarketing

05 **Email and Analytics**
Email flows, GA4, Search Console, UTM tracking

06 **AI Content and Reporting**
Prompting for copy, automation, campaign reports

The big picture
Marketing works as a loop: **understand the audience, attract them (SEO, social, ads), convert and nurture them (email), measure results (analytics), and improve (AI-assisted testing and reporting).**

CHAPTER 01

Marketing Fundamentals

Funnels, audiences, brand positioning, goals

Before using any tool, you need to know who you are talking to, what you promise them, and what success looks like. Every channel in this guide builds on these four ideas.

Key concepts

Funnels	The path a customer follows: **Awareness** (they discover you), **Interest** (they learn more), **Decision** (they compare options), **Action** (they buy), then **Loyalty** (they return and refer). Each stage needs different content.
Audiences	The people you want to reach. Define them by demographics (age, location), interests, problems and buying behavior. Build 2-3 **buyer personas** such as 'Riya, 28, a freelance designer who needs affordable tools'.
Brand positioning	The space you own in the customer's mind. A simple formula: *For [audience], [brand] is the [category] that [key benefit] because [proof].* It keeps your message consistent across every channel.
Goals	Use **SMART** goals (Specific, Measurable, Achievable, Relevant, Time-bound), e.g. 'Generate 200 qualified leads in 90 days at under Rs 300 each'. Track KPIs such as traffic, leads, conversion rate, CPA and ROAS.

How AI helps
Use an AI assistant to draft personas from customer reviews, brainstorm positioning statements, and summarize competitor websites. Always validate AI output with real customer feedback.

Pro tip
Start with one clear goal and one audience. Trying to reach everyone usually reaches no one.

CHAPTER 02

SEO

Keyword research, on-page SEO, technical basics, link building

Search Engine Optimization (SEO) helps your website appear in unpaid Google results. It is slower than ads, but the traffic compounds and costs nothing per click.

Key concepts

Keyword research	Find the words people actually search. Look at **search volume**, **difficulty** and **intent** (informational, commercial, transactional). Tools: Google Keyword Planner, Google Trends, Ubersuggest, Ahrefs, Semrush.
On-page SEO	Optimize each page: one main keyword in the **title tag**, meta description, H1 heading and first paragraph; use clear subheadings, descriptive image alt text, internal links, and genuinely helpful content that matches the search intent.
Technical basics	Make the site easy to crawl and fast: mobile-friendly design, quick loading (Core Web Vitals), HTTPS, an XML sitemap, a clean robots.txt, and no broken links or duplicate pages.
Link building	Links from trusted sites act as votes of confidence. Earn them through useful guides, original data, guest posts, local directories, partnerships and PR. Quality matters far more than quantity.

How AI helps
AI can cluster keywords by topic, suggest content outlines, write meta descriptions and generate FAQ ideas. Review for accuracy and add your own experience so content stays original.

Pro tip
Write for people first, search engines second. Content that solves a real problem ranks best over time.

CHAPTER 03

Social Media Marketing

Content calendars, Meta and LinkedIn ads, reels strategy

Social media builds awareness and community. Organic posts build trust, while paid ads give you controlled reach to the right audience.

Key concepts

Content calendars	A plan of what to post, where and when. Mix content pillars such as **educational, inspirational, promotional and behind-the-scenes**. A common rhythm: 3-5 posts per week, planned monthly, reviewed weekly.
Meta ads (Facebook and Instagram)	Best for consumer brands and local businesses. Choose an objective (traffic, leads, sales), target by interests and location or use lookalike audiences, and test 3-4 creatives. Use the Meta Pixel to track results.
LinkedIn ads	Best for B2B. Target by job title, industry and company size. Costs per click are higher, but lead quality is often better. Lead Gen Forms make sign-ups easy.
Reels strategy	Short vertical video wins reach. Hook viewers in the first 2-3 seconds, keep it under 30 seconds, add captions, use trending audio carefully, and end with a clear call to action. Post consistently and study which reels hold attention.

How AI helps
Generate a month of post ideas, captions, hashtag sets and reel scripts in minutes. Use AI tools to resize creatives and write ad variations for A/B testing.

Pro tip
Repurpose: one blog post can become a LinkedIn post, three reels and a carousel.

CHAPTER 04

Search and Display Ads

Google Ads, bidding, quality score, remarketing

Paid ads put you in front of customers immediately. You pay for results, so measurement and testing are essential.

Key concepts

Google Ads	**Search ads** appear when someone types a keyword and capture high intent. **Display ads** are banners shown across websites and apps and are good for awareness. Structure: Account, Campaign, Ad group, Ads and keywords.
Bidding	How much you pay for results. Start with **Maximize Clicks** to gather data, then move to **Target CPA** or **Target ROAS** once you have conversions. Smart bidding uses machine learning to adjust bids in real time.
Quality Score	Google's 1-10 rating of your keyword, ad and landing page. It depends on expected click-through rate, **ad relevance** and **landing page experience**. A higher score means lower costs and better positions.
Remarketing	Show ads to people who already visited your site or added items to cart but did not buy. These audiences are warm and usually convert at a lower cost. Set frequency caps so ads do not feel annoying.

How AI helps
Use AI to write multiple headlines and descriptions, find negative keywords, and analyze search-term reports. Google's own Performance Max and Smart Bidding also use AI to optimize delivery.

Pro tip
Match your ad message to the landing page. A strong ad sending people to a weak page wastes budget.

CHAPTER 05

Email and Analytics

Email flows, GA4, Search Console, UTM tracking

Email turns interest into sales and keeps customers coming back. Analytics shows what is actually working so you can invest wisely.

Key concepts

Email flows	Automated sequences triggered by behavior: **Welcome series** for new subscribers, **abandoned cart** reminders, **post-purchase** thank-you and review requests, and **re-engagement** for inactive users. Tools: Mailchimp, Brevo, Klaviyo, HubSpot.
GA4	Google Analytics 4 tracks users across web and app using **events**. Set up **conversions** (key events) such as purchases or form submissions, and review acquisition, engagement and conversion reports.
Search Console	A free Google tool showing how you appear in search: queries, impressions, clicks, average position, indexing problems and mobile usability issues. Essential for SEO health checks.
UTM tracking	Tags added to links so analytics knows where a visit came from: **utm_source** (instagram), **utm_medium** (paid_social), **utm_campaign** (diwali_sale). Keep naming consistent, in lowercase, to keep reports clean.

How AI helps
AI can write subject lines, personalize email copy by segment, summarize analytics trends in plain language, and suggest A/B tests to run next.

Pro tip
Build your email list from day one. It is an audience you own, unlike social followers.

CHAPTER 06

AI Content and Reporting

Prompting for copy, automation, campaign reports

AI is a fast assistant, not a replacement for strategy or judgment. The better your instructions and your review process, the better your results.

Key concepts

Prompting for copy	A strong prompt includes **Role, Task, Context, Audience, Tone, Format and Constraints**. Example: *'You are a copywriter. Write 3 Instagram captions for a handmade candle brand targeting women aged 25-35. Warm tone, under 40 words, one emoji, end with a call to action.'* Iterate by asking for revisions.
Automation	Connect tools so repetitive work runs itself: auto-post schedules, lead alerts to Slack or email, CRM updates, and email triggers using Zapier, Make or built-in platform automations. Automate tasks, not thinking.
Campaign reports	A good report answers: what did we spend, what did we get, what did we learn, and what next? Include goals vs results, key metrics (reach, clicks, conversions, CPA, ROAS), top performers and recommendations.
Responsible use	Fact-check claims, protect customer data, disclose AI use where required, keep brand voice consistent, and have a human approve everything before publishing.

Sample prompt for reports
'Here is my campaign data [paste]. Summarize performance in 5 bullet points for a non-technical client, highlight the best and worst ad, and suggest 3 improvements.'

Pro tip
Treat AI output as a first draft. Your edits, data and creativity make the work stand out.

Your 30-Day Starter Plan

A simple path to put everything into practice.

Week 1	Define goal, audience personas and brand positioning. Set up GA4, Search Console and a UTM naming sheet.
Week 2	Do keyword research, fix basic on-page and technical SEO, and publish your first two helpful articles.
Week 3	Create a content calendar, post consistently, and launch a small test campaign on Meta, LinkedIn or Google Ads.
Week 4	Set up a welcome email flow, start remarketing, and use AI to build your first campaign report. Decide what to scale.

Remember

AI speeds up the work, but strategy, creativity and customer understanding still come from you. Test, measure, learn and repeat.
